Project Name	LegalEase: AI-Powered Legal Document Generator
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/sanjays11306/LegalEase-AI-Powered-Legal-Documents-generator
Programming Language(s)	Python, HTML, CSS
Framework(s) Used	Streamlit, FastAPI
Key Features Implemented	AI-based legal document generation using Gemini API; support for multiple legal document types; user input for parties, terms and effective date; FastAPI backend; Streamlit frontend; built-in template fallback when AI generation is unavailable; document preview; editable document interface; TXT, DOCX and PDF export; A4-style pagination and page navigation.
Pending / Incomplete Features	User authentication, database-based document storage/history, and cloud deployment are not included in the current ZIP version.
Setup / Run Instructions	Install Python dependencies using <code>pip install -r requirements.txt</code> . Create <code>.env</code> from <code>.env.example</code> and add the Gemini API key. Start FastAPI using <code>uvicorn main:app --reload</code> . In another terminal, start the frontend using <code>streamlit run frontend/app.py</code> . Open the Streamlit URL in the browser.

Code Quality Checklist

S.No	Criteria	Status (Yes/ No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

LegalEase is implemented using a modular architecture with Streamlit as the frontend and FastAPI as the backend. Gemini API is integrated for AI-based legal document generation, with built-in templates available as a fallback. The application supports document preview, editing and export in TXT, DOCX and PDF formats. The code is organized into separate modules for AI generation, frontend UI, API routing and document processing.
